Microsoft® MacLibrary™ Software Series for Apple® Macintosh™

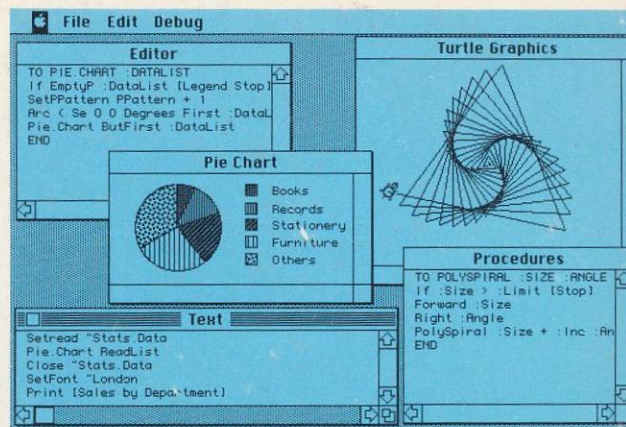

MICROSOFT

Logo

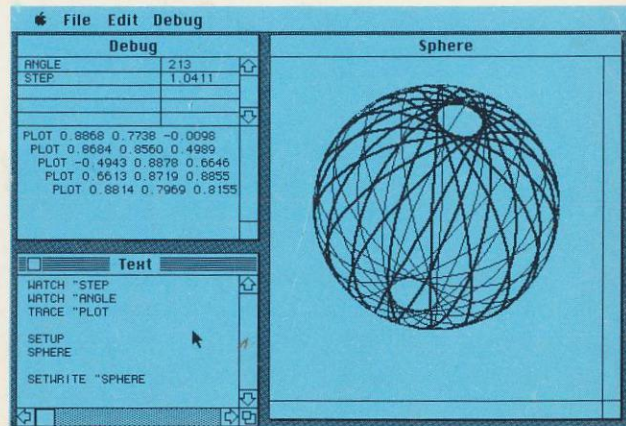

by Logo Computer Systems Inc.

Widely considered the best language for an introduction to computer programming, Logo is now available for the Macintosh. This versatile version of Logo includes multiple windows for data entry and editing. Arrays for high speed processing. A debug window for tracing program flow. And on-line help. All of which makes it ideal for teaching structured programming techniques, problem solving strategies, and abstract thinking skills.

Look for the other titles in our MacLibrary software collection, software programs that are as easy to use as the Macintosh itself.

Take advantage of Logo's multiple text, graphics, and editing windows.

Logo gives you a debug window for tracing program flow, QuickDraw graphics, and more.
